

SUMMARY

Software Engineer with production experience building and deploying AI systems, fine-tuned LLMs with RAG, vector databases, and FastAPI inference. Full-stack background in Node.js/Python, React/TypeScript, and cloud infrastructure, with AI-integrated features delivered at scale to tens of thousands of users.

EXPERIENCE

Associate Software Engineer — Northwind Studio, Remote Dec 2025 – Present

- Shipped a full CMS (React/TypeScript) for managing thousands of learning activities across many courses, including a detailed editor, completeness heatmap, and filtered export pipeline
- Designed a unified Activity CRUD REST API handling 20+ activity types (MCQ, speaking, conversational, media) with multi-file upload
- Built a Google Drive to cloud-blob sync service using background workers, automating media management at scale
- Developed a bulk enrollment tool (CSV preview + batch assignment) serving a large user base
- Implemented a Dropout Risk dashboard segmenting learners into Critical / At Risk / Watch / On Track, enabling data-driven retention actions
- Refactored message delivery across 20+ flow files, centralizing queue pacing and improving reliability across tens of thousands of messages

Associate Software Engineer — Lumen Health, Berlin, Germany Jun 2025 – Dec 2025

- Built and delivered client-facing portals using React/TypeScript, Tailwind CSS, and ShadCN, translating design specs into fully responsive, production-ready UIs across multiple client projects
- Integrated RESTful APIs end-to-end with Zod validation schemas, enforcing data integrity across all data-entry flows

Software Engineer Intern — Acme Research Labs, London, UK Nov 2024 – Apr 2025

- Migrated 2GB+ of structured data across multiple sources in MongoDB with zero downtime, including schema normalization and integrity validation
- Scraped, cleaned, and mapped structured data for 10,000+ entities from a third-party platform to internal API models, enabling downstream analytics features

PROJECTS

SerenityBot — Chatbot [github.com/example/serenitybot](#)

- Fine-tuned an open LLM on a public mental-health dataset with a custom RAG pipeline, enabling domain-specific context-aware responses beyond the base model's capability
- Built full-stack platform: React, FastAPI inference server, vector database for semantic retrieval, and conversation analytics

ARCH360 — AR Visualization Platform (Unity, C#, ARCore/ARKit) [github.com/example/arch360](#)

- Built and shipped a cross-platform AR app in Unity (C#) for Android/iOS as a solo capstone project
- Integrated an AI-driven real-time customization engine, applying ML concepts to a production-style interactive system

EDUCATION

Bachelor's in Computer Science — Example State University, Anytown, USA 2025

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL
Backend: Node.js, Express.js, FastAPI, REST APIs, BullMQ, Sequelize, Microservices
Frontend: React.js, Next.js, Tailwind CSS, ShadCN, Webpack/Vite, HTML5/CSS3
Data & Cloud: PostgreSQL, MongoDB, Redis, MySQL, Vector Databases, Azure, AWS (basic), Docker, GitHub Actions, Linux
AI / ML: RAG, Prompt Engineering, Fine-tuning, LangChain, Pandas, Agile/Scrum, Jest/Unit Testing
